

AI ENABLEMENT – USE CASE PACK

Automotive Distribution and Marketing Company

For Proposal Scoping (No Real Data Shared)

CAVEAT: *These use cases are representative scenarios to help MasterofCode size scope, effort, and commercials. They do not contain real data and are meant purely to articulate our AI analytics expectations on top of Oracle Fusion.*

1. Context & Guardrails

This document outlines representative business use cases to articulate expectations for an AI-enabled analytics solution integrated with Oracle Fusion ERP & CRM.

- Use cases are illustrative and anonymized
- No real data, pricing, volumes, or customer details shared
- Focus on decision intelligence, not transaction replacement
- Phased delivery approach (no big-bang)

2. Overall AI Expectation

- Seamless integration with Oracle Fusion ERP & CRM
- Historical data-driven analytics and recommendations
- Explainable AI outputs
- Phased, scalable rollout starting with Sales, Procurement, and Inventory

3. Phase 1 – Sales Analytics & Order Optimization

Use Case 1 - Monthly Vehicle Order Optimization

Business Question

“How should we optimize monthly vehicle orders to reduce overstock and missed demand?”

AI Expectation

- Analyze historical sales trends by:
 - Model
 - Variant
 - Color
 - Interior/exterior options
- Identify:
 - Fast-moving vs slow-moving configurations
 - Seasonal demand patterns
 - Regional preferences
- Generate **recommended order mix** for upcoming month(s)

Output (Illustrative)

- Suggested order quantity by configuration
- Risk indicators (overstock/understock)
- Confidence level of recommendation

Oracle Touchpoints

- Sales history (Fusion)
- Item / model master
- Time-series data

Use Case 2 - Sales Forecast Accuracy Improvement

Business Question

“Where are our forecasts consistently over- or underperforming?”

AI Expectation

- Compare planned vs actual sales
- Detect bias patterns (optimism/conservatism)
- Highlight SKUs with recurring forecast variance
- Recommend forecast adjustment factors

Output

- Forecast deviation dashboard
- AI-suggested correction factors
- Early warning flags

Use Case 3 - Configuration-Level Demand Insights

Business Question

“Which configurations are driving demand vs becoming dead stock?”

AI Expectation

- Analyze configuration combinations (model + color + options)
- Identify:
 - High demand clusters
 - Low rotation combinations
- Support pricing, promotion, or discontinuation decisions

Output

- Configuration heatmap
- Demand decay alerts

4. Phase 2 – Procurement & Inventory Intelligence

Use Case 4 - Procurement Quantity Optimization

Business Question

“How much should we procure to balance demand, lead time, and inventory cost?”

AI Expectation

- Analyze:
 - Historical procurement vs sales
 - Supplier lead times
 - Inventory holding patterns
- Recommend optimized procurement quantities

Output

- Recommended procurement ranges
- Lead-time risk indicators

Use Case 5 - Inventory Aging & Overstock Risk

Business Question

“Which inventory is at risk of aging or obsolescence?”

AI Expectation

- Identify slow-moving vehicles and parts
- Predict aging risk based on past behavior
- Suggest actions:
 - Promotion
 - Redistribution
 - Procurement pause

Output

- Aging risk score
- Action recommendations

5. Phase 3 – Cross Functional & After-Sales Insights

Use Case 6 - Sales vs After-Sales Demand Correlation

Business Question

“How do sales patterns correlate with after-sales demand?”

AI Expectation

- Analyze service frequency by:
 - Vehicle model
 - Mileage bands
 - Time since sale
- Identify models driving higher service volumes

Output

- Model-wise service intensity index
- Input to future sales & inventory planning

Use Case 7- Spare Parts Demand Prediction

Business Question

“Which parts should we stock more accurately based on sales mix?”

AI Expectation

- Correlate vehicle sales mix with service history
- Predict parts demand trends
- Reduce emergency procurement

Output

- Parts demand forecast
- Stock optimization suggestions

6. Phase 4 – Executive Decision Enablement (Real-Time)

Use Case 8 – Executive Decision Cockpit

Business Question

“What decisions need attention this month?”

AI Expectation

- Surface exceptions only:
 - Sales underperformance
 - Overstock risk
 - Procurement mismatches
- Natural language insights (optional)

Output

- AI-generated insights summary
- Priority actions list

7. Integration & Architecture Expectations

- Oracle Fusion as system of record (Seamless integration with Oracle Fusion ERP & CRM)
- Read-only analytics initially
- Explainable AI (recommendation logic visible)
- Secure, role-based access
- Scalable architecture (sales → procurement → inventory → after-sales)

8. Proposal Expectations

Using the above use cases, MasterofCode to propose:

- AI architecture & integration approach
- Phased delivery plan and timelines
- Commercials per phase
- Assumptions and dependencies
